ENTRANCE HANDLESET

Drilling Template

EH707

⚠ CAUTION

Although a door can be prepared by an untrained person, we recommend that measurements and drilling be done by a skilled carpenter or locksmith.

1. Decide on height of door (recommended centreline is 914mm from floor).
2. Decide on backset (ie, distance from door edge to centre of handle).
3. Fold template using required backset.
4. Position on required height of door.
5. Mark the correct hole positions for this handleset. Note: the two 25mm hole positions must be central to the door face.
6. Double check measurements against handleset before drilling into door face.
7. Drill 1x 54mm hole for deadbolt, 1 x 54mm hole for handleset, and 1x 9mm hole.
8. Drill 2x 25mm holes in centre of door face to the depth of latch and deadbolt.
